

PROCUREMENT CAPABILITY PROFILE · 2026

Procurement excellence for Nigeria's oil & gas companies.

Strategic sourcing · Equipment & materials supply · Vendor management · Logistics & expediting

INTRODUCTION

Who we are

V12 Oil and Gas Ltd exists to simplify procurement for Nigeria's oil and gas operators. Incorporated in May 2019, we are an indigenous procurement and supply chain partner serving upstream, midstream, downstream and power infrastructure operations, combining deep local operating knowledge with disciplined commercial process.

We sit at the intersection of technical understanding and commercial reliability. Our background across facility upgrading, pipeline integrity, instrumentation and civil works means we know what equipment has to do on site, not just what it costs.

HOW WE DELIVER

The V12 supply model

One controlled sequence from enquiry to site delivery, with a single owner accountable at every stage. Packages can be taken end to end, or at any stage.

01**Enquiry**

RFQ review, BOQ validation and specification cross-referencing.

02**Sourcing**

Market sounding, OEM qualification, tendering and vendor evaluation.

03**Expediting**

Purchase-order placement, manufacturing slot control and progress chasing.

04**Inspection**

Factory Acceptance Testing, MTRs, OEM warranties and documentation.

05**Delivery**

Freight, customs clearing, receiving inspection and last-mile delivery.

VISION & MISSION**Vision**

To be the preferred Nigerian procurement and supply chain partner for energy projects, trusted for technical competence, commercial discipline and consistent execution.

Mission

To advance reliable sourcing, strong vendor networks and disciplined logistics so that operators receive the right materials, at the right quality, at the right time.

SERVICE MODULE

Strategic sourcing & procurement management

End-to-end management of the procurement cycle, from requirement clarification to purchase-order placement and expediting.

- Requirement clarification and market sounding
- Competitive tendering and vendor evaluation
- Negotiation, purchase-order placement and expediting
- BOQ validation and specification cross-referencing
- Long-lead item optimisation
- Global and domestic OEM qualification

SERVICE MODULE

Industrial equipment & materials supply

Sourcing, packaging and supply of the equipment and materials that energy projects run on.

- Rotating equipment: pumps, compressors, turbines and drive units
- Instrumentation, process automation and CADD packages
- Solar power systems, UPS and industrial stabilisers
- Line pipes, high-pressure valves, fittings and cathodic protection
- Fireproofing materials, deluge systems and safety infrastructure
- Project IT: computing hardware and industrial printers

SERVICE MODULE

Vendor management & supply chain coordination

Ongoing management of the supplier networks that determine whether a schedule holds.

- Performance management and auditing of local and international suppliers
- Competitive sourcing frameworks
- Priority manufacturing slots to mitigate disruption
- Factory Acceptance Testing management
- Material Traceability Reports and OEM warranties
- Material documentation management

SERVICE MODULE

Logistics, expediting & site support

Moving the package from factory gate to installation point, onshore or offshore.

- Freight forwarding by air, sea and land
- Customs clearing and inland transportation
- Delivery to remote onshore and offshore staging points
- Warehouse receiving inspections
- Inventory consolidation and last-mile scheduling
- Technical fit-for-purpose verification

FEATURED CAPABILITY

Equipment & material scope

CATEGORY	TYPICAL EQUIPMENT & MATERIAL SCOPE	PRIMARY FIELD APPLICATION
Rotating equipment & drive packages	Pumps, compressors, industrial turbines and drive assemblies	Upstream production, midstream pumping stations, power plants
Piping & pipeline infrastructure	Line pipes, high-pressure valves, fittings, coating and wrapping supplies	Field construction, pipeline revamping and rehabilitation
Instrumentation & control	Process automation, CADD packages, solar micro-grids, UPS and stabilisers	Facility automation, off-grid power, platform monitoring
Safety & structural materials	Passive fire protection, deluge systems, fireproofing and structural steel	Platform safety, terminal upgrades, jetty infrastructure
Project infrastructure IT	Computing hardware, industrial printers and operational accessories	Site offices and control rooms

Documentation Delivered packages are accompanied by Material Traceability Reports and OEM warranties, with Factory Acceptance Testing managed and recorded where the

INDUSTRIES SERVED

Sectors we supply

Structured procurement built around the operational demands, compliance standards and harsh environments of Nigeria's energy sectors.

Upstream

Scope

Offshore platforms, shallow water facilities, flow stations and wellhead clusters.

Key supplies

High-pressure valves, manifolds, wellhead components, platform UPS and corrosion protection.

Midstream & gas

Scope

Cross-country pipelines, pumping stations, compressor sites and export terminals.

Key supplies

Line pipe, pigging support supplies, cathodic protection, compressor packages, coating systems.

Downstream

Scope

Refineries, petrochemical plants, tank farms, gas processing and marine jetties.

Key supplies

Plant piping, industrial fireproofing, deluge systems, structural steel and consumables.

Power & civil

Scope

Power generation, industrial facilities, access roads, drainage, jetties and perimeter security.

Key supplies

Solar assemblies, power stabilisers, civil supplies, piling materials.

WHY V12

Local mastery. Technical depth. Reliable execution.

Local expertise, commercial discipline

Deep familiarity with the Nigerian operating environment, regulatory expectations and inland logistics realities, combined with structured commercial process.

Technical understanding

Our heritage across facility upgrading, pipeline engineering, instrumentation and civil works means we understand what equipment must actually do in service.

Compliance & quality assurance

Adherence to client specifications, NOGICD Act guidelines and NUPRC requirements, with MTRs and OEM warranties on delivered packages.

Speed without shortcuts

Active expediting and robust vendor networks reduce lead times while preserving specification integrity and safety controls.

Reliable execution

Clear ownership from initial enquiry through to site delivery. Every RFQ is treated as a commitment to performance, not just a commercial quote.

Partnership approach

We operate as an extension of internal procurement and project teams: transparent on progress, proactive on risk, focused on keeping assets moving.
